

CAMBIUM PTP 800 SERIES

HIGH-SPEED LICENSED MICROWAVE FOR FEDERAL NETWORKS

Our Cambium Point-to-Point (PTP) 800 Licensed Ethernet Microwave solutions can efficiently and affordably transport the data, voice and video that your U.S. Federal Government applications require. With models in the 7 GHz and 8 GHz dedicated bands, you do not have to contend with other communicators in your chosen radio-frequency (RF) band.

NTIA-COMPLIANT

Our 7 and 8 GHz PTP 800 models are National Telecommunications and Information Administration (NTIA) compliant and operate at speeds up to 301 Mbps¹ (full duplex) over user-configurable channel bandwidths from 10 to 50 MHz. The radios provide high-performance, ultra-reliable and secure connectivity and backhaul for a wide array of Department of Defense (DoD) and non-DoD applications such as:

- Leased-line and fiber replacements and extensions
- Video surveillance extensions beyond a wired infrastructure
- Network redundancy for a wired or fiber network
- Building-to-building and office campus connectivity
- Added capacity for voice and video communications
- High-capacity backhaul for WiMAX and LTE networks
- Border security connectivity and backhaul

EXTREME DURABILITY

PTP systems have logged more than two billion field hours. As a result, our radios are proven to withstand the rigors of outdoor use. Radios perform steadfastly in winds up to 150 miles per hour (242 kph) and temperatures from -27° to 131° F (-33° to 55° C).

NOTE: While the information presented herein is, to the best of our knowledge, true and accurate, the information provided in this document is subject to change without notice.

¹ 301 Mbps maximum throughput requires a 50 MHz channel and 256 QAM which may not be available in certain regions due to regulatory restrictions.

² Regulatory conditions for RF bands may vary by geographic location and should be confirmed prior to system purchase.

³ Transmit power depends on frequency, modulation and regulations.

⁴ Receive sensitivity depends on frequency, channel bandwidth and modulation (-90.0 dBm is based on a 7 GHz model with 10 MHz channel bandwidth and the QPSK mode).

⁵ While FIPS 140-2 is compatible with existing systems, certain hardware limitations may apply. Certification status may be confirmed at: <http://csrc.nist.gov/groups/STM/cmvp/inprocess.html>

⁶ User throughput depends on the configuration of channel bandwidth, modulation and capacity license key. Radios ship with factory-set 10 Mbps throughput capacity cap; additional capacity may be purchased at time of order or anytime after deployment. Full capacity is not available for all combinations of bands and regulations.

⁷ Web access via HTTPS/TLS is available on AES-enabled radios.
